August 4th-6th at The Ohio State University.

A NEW PERSPECTIVE ON DE BRUIJN TORI

Igor Konfisakhar & Joseph J Marincel

East Tennessee State University [Mentor: Anant Godbole]

Abstract of Report Talk: While Eulerian circuits have been used successfully to demonstrate the existence of De Bruijn cycles, the traditional approach to the 2-dimensional analogue uses different machinery. We examine the possibility of graph-theoretic existence proofs for particular De Bruijn tori.
