

YMC 2006

Young Mathematicians Conference 2006

August 4th-6th at The Ohio State University.

RANDOM GEOMETRY

Joseph J Marincel & Ariel R Levavi

Eastern Tennessee State University [Mentor: Anant Godbole]

Abstract of Report Talk: Consider graphs of the form $G = G(\pi)$ consisting of n vertices in 'general position' on the circumference of a circle, with chords drawn between v_i and $v_{\pi(i)}$ for a given permutation π of length n . We examine the distribution of faces created, and explore connections with permutation tableaux. [MJ14155048]
