

Fundamenta Nova

Carl Jacobi

TABLE OF CONTENTS

§ 1–34	ON TRANSFORMATIONS OF ELLIPTIC FUNCTIONS	55–138
1	Exposition of general problems of transformation	55
3	Principles of transformation	57
5	Reduction of an expression $\frac{dy}{\sqrt{\pm(y-\alpha)(y-\beta)(y-\gamma)(y-\delta)}}$ to the simpler form $\frac{dx}{M\sqrt{(1-x^2)(1-k^2x^2)}}$	60
10	Transformation of an expression $\frac{dy}{\sqrt{(1-y^2)(1-\lambda^2y^2)}}$ into others of the form $\frac{dx}{M\sqrt{(1-x^2)(1-k^2x^2)}}$	69
13	A third order transformation	74
15	A fifth order transformation	77
16	Multiplication using composition of transformation	80
17	Notation of the new elliptic functions	81
18	Basic elliptic function identities	83
19	Complex values in elliptic functions; principal double periods	85
20	Analytic transformations of elliptic functions	87
21	Derivation of analytic identities by a transformation	90
24	Several transformations of the same order; transformations of two reals; transformations of larger moduli into smaller and conversely	100
25	Complementary transformations	108
26	Supplementary transformations	111
27	Formulas to transform modulus λ into modulus k	113
28	Analytic formulas for multiplication of elliptic functions	120
29	On states of modular equations	122
 § 35–66	 THE THEORY OF REPRESENTATION OF ELLIPTIC FUNCTIONS	 141–239
35	Representation of elliptic functions as infinite products	141
39	Representation of elliptic functions as Fourier sine and cosine series	155
43	Representation of sn^n and ns^n as Fourier sine and cosine series	170
47	Elliptic integrals of the second kind expanded into series	187
49	Elliptic integrals of the third kind parameterized by amplitude	191
51	Elliptic integrals of the third kind expanded into series and expressed in terms of the new transcendental Θ	195
53	Addition of arguments, amplitudes and parameters in elliptic integrals of the third kind	204
56	Imaginary transformations for Z , Θ and elliptic integrals of the third kind	214
61	Elliptic functions as quotients; the functions H and Θ as numerators and denominators of elliptic functions	224
62	Series representation of H and Θ ; the third formulation of elliptic function theory	228
